

SCGR series have all rake tines 3/8" A572 The SCGR is based on using the full power of a 30hp tractor. It can be used on higher hp machine for general use. These units have been time tested throughout the industry.

This unit has 1.5" x 4" cylinders, which are rated at 3000 psi. At 3000 psi the combine is 10,602 lbs of force

The mounts on these units are low and tight against the main frame to retain the factory breakout force.

The SCGR was designed with the hydraulic cylinders tucked in close so they don't interfere with the mounts, so you can go as narrow as your mounts for tight places.

This series is great for the Sub-compact tractors and walk behind machines. Great for the hobby farmers and Landscapers. Great for placing rocks, cleaning up after storms, tearing out old scrubs, moving logs, and so much more.
